Applicant: Gregory John Billington et al. Attorney's Docket No.: 07703-Serial No.: 10/849,510 0340RE1 / WIN0208RE1/

Filed : May 19, 2004 Page : 2 of 11

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

 (Five times amended) A <u>first</u> device for handling money <u>that facilitates</u> <u>communications between an external controller and a further money handling device</u>, <u>the first</u> <u>device for handling money comprising</u> [including]:

a money handling apparatus;

an internal controller in the money handling apparatus for controlling the money handling apparatus;

a first port for removable connection to [an] the external controller so as to couple the external controller to the internal controller for communication with the internal controller; and

a second port for removable connection to [a] the further money handling device [for handling money]:

wherein the internal controller is arranged to communicate over the second port <u>directly</u> with the further <u>money handling</u> device using a communications protocol <u>that is not fully</u> supported over the first port; and

wherein the communications protocol <u>supports</u> [enables] communication between the internal controller and [any one] <u>each</u> of at least first and second different types of <u>money handling</u> devices [for handling money], the first type handling money of a different type from those handled by the second type_a

the first device for handling money being arranged such that communications between the external controller and the further money handling device are relayed by the internal controller.

 A device as claimed in claim 1, wherein the first and second types of device are different members of a group consisting of a banknote validator and a card reader. Applicant: Gregory John Billington et al. Attorney's Docket No.: 07703-Serial No.: 10/849,510 0340RE1 / WIN0208RE1/

Filed : May 19, 2004 Page : 3 of 11

(Once amended) A device as claimed in claim 1 [2], wherein the [group further
consists of] first and second types of device are different members of a group consisting of a
banknote validator, a card reader and a coin dispenser.

- A device as claimed in claim 1, wherein the communications protocol is a busoriented protocol.
- A device as claimed in claim 4, wherein the communications protocol is an MDB protocol.
- 6. (Once amended) A device as claimed in claim 1, wherein the internal controller is arranged to distinguish between said first and second types of money handling devices [for handling money] by a code received from said further money handling device over said second port.
- (Three times amended) A method of communication for a <u>first</u> money handling apparatus, including:

communicating with an external controller over a first port of the first money handling apparatus, and

communicating <u>directly</u> with a further money handling apparatus over a second port <u>of</u> <u>the first money handling apparatus</u> by means of a communications protocol supporting communication with [any] <u>each</u> one of at least first and second different types of device for handling money, the first type handling money of a different type from that handled by the second type, wherein the communications protocol is not fully supported over the first port.

(Five times amended) A <u>first</u> device for handling money <u>that facilitates</u>
 <u>communications between an external controller and a further money handling device, the first</u>

Applicant: Gregory John Billington et al. Attorney's Docket No.: 07703-Serial No.: 10/849.510 0340RE1 / WIN0208RE1/

Filed : May 19, 2004 Page : 4 of 11

device for handling money comprising [including]:

a money handling apparatus;

an internal controller in the money handling apparatus for controlling the money handling apparatus:

a first port for removable connection to [an] the external controller so as to couple the external controller to the internal controller for communication with the internal controller; and

a second port for removable connection to [a] the further money handling device [for handling money] for direct communication with the internal controller according to a communications protocol not fully supported by the first port:

the first device for handling money being arranged such that communications between the external controller and the further money handling device are relayed by the internal controller, wherein the internal controller is arranged to copy the content of at least some signals between the first port and the second port without modification thereof.

9. (Canceled)

- 10. (Once amended) A device as claimed in claim 8 arranged such that [, wherein] the content of some of the signals received on the second port is modified prior to output on said first port.
- 11. (Twice amended) A device as claimed in claim 10 [, wherein] arranged such that said signals, the content of which is modified, includes signals characteristic of the further money handling device and not recognisable by said external controller.
- 12. A device as claimed in claim 8, wherein the internal controller implements, on both said first and second ports, a bus-oriented communications protocol.

Applicant: Gregory John Billington et al. Attorney's Docket No.: 07703-Serial No.: 10/849.510 0340RE1 / WIN0208RE1/

Filed : May 19, 2004 Page : 5 of 11

 (Once amended) A device as claimed in claim 8 <u>arranged such that</u> [, wherein] said signals are stored in memory prior to output.

14. (Four times amended) A method of communication for a <u>first</u> money handling apparatus, including:

communicating with an external controller over a first port of the first money handling apparatus; and

communicating <u>directly</u> with a further money handling apparatus over a second port <u>of the first money handling apparatus according to a communications protocol not</u> <u>fully supported by the first port;</u>

wherein the content of <u>at least some</u> signals is copied between said first and second ports <u>without modification</u>.

15. (Three times amended) A first device for handling money that facilitates communications between an external controller and a further money handling device, the first device for handling money comprising [including]:

a money handling apparatus;

an internal controller in the money handling apparatus for controlling the money handling apparatus;

a first port for removable connection to [an] the external controller so as to couple the external controller to the internal controller for communication with the internal controller; and

a second port for removable connection to [a] the further money handling device [for handling money] for direct communication with the internal controller according to a communications protocol not fully supported by the first port;

wherein the internal controller is arranged to convert between first units of value used for communications over said first port and second units of value used for communication over said second port. Applicant : Gregory John Billington et al. Attorney's Docket No.: 07703-Serial No.: 10/849,510 0340RE1 / WIN0208RE1/

Filed : May 19, 2004 : 6 of 11 Page

16. (Once amended) A device as claimed in claim 15, wherein the internal controller is arranged to receive an indication of the value of money received by said further money handling device in said second units, to convert said value to said first units, and to output data representing said value in said first units on said first port.

- 17. A device as claimed in claim 15, wherein the internal controller is arranged to receive a command including an indication of a value in said first units on said first port, to convert said value to said second units, and to output a corresponding command including an indication of said value in said second units on said second port.
- 18. (Once amended) A device as claimed in claim 15, wherein the internal controller is arranged to determine a first value of money received by said money handling apparatus, to receive an indication of a second value of money received by said further money handling device in said second units, and to combine said first and second values as a combined value in a single set of units.
- 19. (Three times amended) A method of communication for a money handling device, including:

communicating with an external controller via a first port of the money handling device. communicating directly with a further money handling device via a second port of the money handling device according to a communications protocol not fully supported by the first port, and

converting between first units of value used for communication over said first port and second units of value used for communication over said second port.

20. (Three times amended) A first device for handling money that facilitates communications between an external controller and a further money handling device, the first device for handling money comprising [including]:

a money handling apparatus;

an internal controller in the money handling apparatus for controlling the money handling apparatus;

a first port for removable connection to [an] the external controller so as to couple the external controller to the internal controller for communication with the internal controller; and a second port for removable connection to [a] the further money handling device [for

handling money] for direct communication with the internal controller according to a communications protocol not fully supported by the first port;

wherein the internal controller is arranged to receive a code indicative of the type of the further device on the second port, and to output in response thereto on the first port an amended code representative to said external controller of a type different from that of the further money handling device.

21. (Three times amended) A method of communication for a first money handling device including:

communicating with an external controller via a first port of the first money handling device,

communicating directly with a further money handling device via a second port of the first money handling device according to a communications protocol not fully supported by the first port,

receiving a code indicative of the type of the further device on the second port, and outputting in response thereto on the first port an amended code representative to said external controller of a type different from that of the further device.

22. Canceled

23. Canceled.

Filed : May 19, 2004 Page : 8 of 11

24. The device of claim 1 wherein the money handling apparatus comprises a banknote validator.

- 25. The device of claim 1 wherein the money handling apparatus is operable to return change.
- 26. The device of claim 8 wherein the money handling apparatus comprises a banknote validator.
- 27. The device of claim 8 wherein the money handling apparatus is operable to return change.
- 28. The device of claim 15 wherein the money handling apparatus comprises a banknote validator.
- 29. The device of claim 15 wherein the money handling apparatus is operable to return change.
 - 30. (Canceled)
 - 31. (Canceled)
- 32. The device of claim 20 wherein the money handling apparatus comprises a banknote validator.
- 33. The device of claim 20 wherein the money handling apparatus is operable to return change.

Canceled.

- Canceled.
- 36. (Twice amended) A first device for handling money that facilitates communications between an external controller and a further money handling device, the first device for handling money comprising:

a money handling apparatus;

an internal controller in the money handling apparatus for controlling the money handling apparatus;

a first port for removable connection to the external controller so as to couple the external controller to the internal controller for communication with the internal controller; and

a second port for removable connection to the further money handling device, wherein the first and second ports do not have a common electrical connection for data transfer:

wherein the internal controller is arranged to communicate over the second port directly with the further device using a communications protocol; and

wherein the communications protocol supports communication between the internal controller and each one of at least first and second different types of money handling devices, the first type handling money of a different type from those handled by the second type.

- 37. A device as claimed in any one of claims 1 or 8 wherein the internal controller is arranged to communicate over the second port using a different version of a communications protocol supported by the first port.
- 38. The method of any one of claims 7 or 14 including communicating over the second port using a different version of a communications protocol supported by the first port.

Applicant: Gregory John Billington et al.

Filed : May 19, 2004 Page : 10 of 11

39. A device as claimed in any one of claims 1 or 8 wherein the internal controller is arranged to communicate over the second port using a communications protocol different from a communications protocol supported by the first port.

40. The method of any one of claims 7 or 14 including communicating over the second port using a communications protocol different from a communications protocol supported by the first port.
